*Allowable Subject Matter*

1> Claims 1-7 are allowed.

2> The following is an examiner's statement of reasons for allowance: The claims disclose two features that distinguish the invention over the prior art. In particular, the invention is directed towards a method of load balancing between multiple packet relaying apparatuses utilizing address tables at each of the apparatuses. Load balancing is achieved by transferring addresses of connected terminals from a table of one apparatus to a table of another apparatus, whereby the connected terminal is serviced by the apparatus containing the terminal's particular address in the address table. Nothing in the prior art, and in the networking arts, disclose this method of load balancing. Further, the method is implemented in a network where the apparatuses are connected to a plurality of segments, the connected terminals located in the segments. Nothing in the networking arts discloses the combination of the described load balancing method within a network containing a plurality of segments.

Thus, claims 1-7 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

*Conclusion*

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
